Proficiency Test List - GBP

WATER & ENVIRONMENTAL MICROBIOLOGY PROFICIENCY TESTS

Modern water distribution systems in developed countries provide clean water to vast populations, so regular monitoring of water for microbiological safety is highly regulated. A failure in the system could lead to a significant public health risk, if such a widespread and essential commodity were to become contaminated with a pathogenic organism.

The Fapas® programme covers all the common indicator organisms for drinking water, as well as *Legionella* spp. in environmental (cooling) waters and common water parasites (Cryptosporidium and Giardia). The programme also covers tests for swimming pool and spa waters and tests for outdoor bathing waters, whether they are swimming lakes or beach bathing.
